

When this file refers to “I,” “me,” “my,” “mine,” or “he” it means this website’s owner and author, Michael Kupferschmid. When this file refers to “any person,” “people,” “you,” “your,” “yours,” or “yourself” it means the person who is visiting this website or accessing its contents. When this file uses the word “work” it means a document, a piece of computer program code, or the documentation for a piece of code. This document has 5 pages.

My Disclaimers of Liability

This web page provides links to several other websites. I have visited them without incident or injury, but I make no representation as to their safety or the nature of the business conducted by their owners. You may use the links as a convenience, but I cannot guarantee that they are current or accurate. Whether or not they are correct, you visit the websites to which they point *at your own risk*, and I disclaim responsibility for everything you do there.

This website also offers various files for visitors to download, and it is my hope and intention that people will do that. I try very hard to keep all of the files correct, consistent, harmless, and legal, but at any given time some of their contents reflect developments still in progress. Downloaders are cautioned that *anything free comes with no guarantee*.

All of these files are offered *as is*; you may use them, in some cases subject to specific limitations, but only *at your own risk*. Michael Kupferschmid makes no warranty that they are free of error, that they do not infringe the intellectual property rights of third parties, that they conform to any particular standard of merchantability, or that they are suitable for any particular purpose, and he disclaims all liability for direct, indirect, incidental, special, exemplary, or consequential damages resulting from their use, however caused and on any theory of liability, even if he is advised of the possibility of such damage.

Additional disclaimers particular to their context appear in §0.9 of *Classical Fortran*, in the verso text and §0.6 of *Introduction to Mathematical Programming*, in the verso text of *Exercise Solutions*, in the verso text of *How To Give College the Old College Try*, and in the ReadMe file of `impsrc.tar.gz`.

Your Use of My Work

The portrait sketch is © 2012 Normand Canter; it may be viewed here but may not be used in any other way without the permission of his estate. All of the other files, including those that are contained within the `tar` archives, are © 2024 Michael Kupferschmid, all rights reserved, whether or not a copyright notice appears within them.

Files `index.html`, `cons.pdf`, `prog.pdf`, `teach.pdf`, `contact.pdf`, `cv.pdf`, `about.pdf`, `rp.pdf`, `extracv.pdf`, and this file `disclaim.pdf` may be read on this website or printed for reference but may not be used in any other way without my prior written permission.

The other files are licensed for specific uses as described below; if you use any of them in a way that violates its license without obtaining my prior written permission, you will place yourself at risk of being sued by me for copyright infringement. Precedent for the enforcement of public copyright license provisions in this way was established by a 2008 decision of the Court of Appeals for the Federal Circuit in *Jacobsen vs. Katzer*.

Documents. Any person who obtains a *document*, downloadable from this website as a file whose name has the extension `.txt` or `.pdf`, other than the `.pdf` files mentioned above, is hereby offered a license to use it under CC-BY 4.0:

if and only if you comply with the terms specified in
<https://creativecommons.org/licenses/by/4.0/legalcode.txt>
then you may use the document in the ways permitted by that license.

Software. Any person who obtains *software*, as a file that is downloaded from this website and having

contents	with filename extension
computer program source code	<code>.c</code> or <code>.f</code> or <code>.m</code>
Unix shell script	none
L ^A T _E X 2 _ε source	<code>.tex</code>
data	<code>.dat</code> , <code>.hsh</code> , <code>.help</code> , <code>.bashrc</code> , or none

or which contains such content transcribed from a file downloaded from this website, is hereby invited to use it in the ways listed after **you may...** below, subject to the conditions specified after **you must...** I intend these conditions and permissions to constitute a license, conforming to the OSI open source definition and compatible with more restrictive definitions. This license is irrevocable while its terms are complied with (but is revoked the moment they are not), perpetual (for the term of the relevant copyright), world-wide, non-exclusive, and royalty-free, and it is provided at no charge; all of the software that is downloadable from this website is “free, as in free beer.”

You *may not* use the software in any way *unless* you honor these six conditions: **you must...**

1. Accept sole responsibility for determining the appropriateness of using or redistributing my work in the way that you have decided to use or redistribute it, and assume all risks associated with your exercise of the permissions granted by this license.
2. Do nothing (such as patenting or trademarking a modification of my software) that might discourage or prevent me or others from using my original work.
3. Include in any work you convey to a third party the boxed paragraph from the Disclaimers section of this file. If you neglect to include those disclaimers, or if you accept a liability that I have disclaimed, you agree to indemnify me from any claim the third party asserts. If you use any part of my code or documentation in a work that is subject to government regulation, such as the ITAR (22 CFR parts 120-130), you agree to comply with the law and to defend me in any prosecution arising from your use of the work.
4. Disclose this website as the origin of my software if you use the software on behalf of a third party, and inform the third party of the Disclaimers in the boxed paragraph.

5. Affirm my intellectual property rights and acknowledge my contribution to the community by preserving my copyright notice “© 2024 Michael Kupferschmid, all rights reserved” (or if none is present by adding it) and by including either the URL of this file or the boxed disclaimers and the verbatim text of these license provisions in any original, modified, or derived work that you convey to a third party. If you use or quote any work of mine in any work of yours under the fair-use provisions in Sections 107 and 108 of the 1976 United States Copyright Act, or if you use it in teaching a class under the provisions of Section 110, you agree to identify this website as its source.
6. Clearly identify any changes you make to my work in creating a modified or derived work, explain that your use of my work does not constitute an endorsement by me of the modified or derived work, and refrain from using my name in the advertisement or promotion of your work unless I have given you prior written permission.

If you *do* honor those six conditions then I grant you permission to use the software in all of the following ways: **you may...**

- store the file on your computer;
- view, print, read, study, and reverse-engineer its contents;
- compile it and run the executable;
- discuss the code or documentation in a class, and assign students to run or modify it;
- copy, publish, or redistribute it in source or object form, or post it on a website;
- quote from it in other writings;
- run it on behalf of third parties, with or without charge to them;
- incorporate it into your program or bundle it with other software, even if your program or the other software is differently licensed;
- modify or adapt it, create derived works, and distribute the result, including under a proprietary license, whether open- or closed-source, or under a more restrictive open-source license such as the GNU GPL;
- copyright any parts that you add (but only those parts);
- advertise, promote, and sell the software and documentation under any license;
- charge for customization, installation, or support of the software.

If you discover a mistake, make an improvement, or produce a derivative work based on something from this website I will be grateful if you inform me by sending email to the appropriate address given at the *contact* tab.

My Use of Others' Work

If you believe that I have infringed your intellectual property rights, please tell me by sending email to the appropriate address at the *contact* tab so that I can correct the error.

Permissions. The portrait sketch is used here with permission of the artist who drew it. The publisher of *Classical Fortran* purchased permissions to use the cartoons that appear in that book. Making a website public implicitly grants permission to access it, so the links that I have provided to websites owned by others are present here with their permission.

Fair Use. Federal law permits the limited use of copyrighted material without first obtaining permission from the copyright holder; see https://en.wikipedia.org/wiki/Fair_use and https://en.wikipedia.org/wiki/TEACH_act. A fair use is one that is not for profit, has an educational purpose, advances knowledge or the progress of the arts through the addition of something new, does not copy an expression of facts or ideas verbatim except for brief quotations that are properly cited, and does not discourage potential buyers or otherwise harm the copyright holder's ability to exploit the original work. Based on my understanding of these provisions I make the following assertions about the contents of this website.

- My published textbooks that are listed on this web page (*Introduction to Operations Research*, the two editions of *Classical Fortran*, and their solutions manuals) are commercial products whose sale benefits their publishers and pays me royalties. The supplementary materials that I make available here (a complete table of contents for each book, errata for each edition, and additional sections and exercise solutions for *Classical Fortran*) are derived works that *benefit* the copyright holders by *encouraging* potential buyers. I do intend these supplementary materials to be for profit, but they meet the other fair use tests and I believe they do no injury to the copyright holders.
- For the course “Reading Classical Hebrew” I provide supplementary content of my own composition and an alphabetical index to all of the course materials. These addenda are used in conjunction with the required textbook *The First Hebrew Primer*, but I believe they are not sufficiently derivative of it to infringe its copyright. The file `supp.pdf` includes scans of a few representative pages from each of one dictionary, two siddurim, and two Chumashim, annotated to explain how to use those books, and I believe this meets the tests of fair use. In teaching the course on Zoom I display textbook pages so that I can point to words as the students read from their own copies of the printed book. I believe that this classroom use of the book is also permitted by the Copyright Act, and that my use of Zoom is therefore in compliance with its Terms of Service.
- My book *Hannah Senesh Word by Word* is adapted from a Hebrew reader published by an organization that appears to be no longer in existence. To make my book I revised the original text, produced an English translation, and typeset the result in a format that facilitates learning the Hebrew vocabulary. My diligent efforts to contact the most likely successor organization having failed, the owner of the 1952 copyright on this orphaned work remains unknown to me.

- My textbook *Introduction to Mathematical Programming*, which is released under a Creative Commons license by way of this website, refers to several software packages by their trademarked names (see the verso page of that book) and I believe that doing so is fair use.
- I assert that I have fairly used ideas from software written by others in footnote 12 on page 52 of *Computing Fourier Transforms*, and I cite the prior work of others in the note to reference [201] on page 7 of additional textbook section 18.4+ in `add1.pdf`.
- The Hebrew font files are freely downloadable from <https://ctan.org/pkg/redis> so I assume that they are in the public domain.
