Errata for "Classical Fortran" second edition

page	corrections
99	In observation 6, the reference to Section 14.1.3 should be to Section 14.1
159	The example showing redirection of both standard out and standard error to the same file should read unix[20] a.out < input > output 2>&1 &
210	The last 9 lines of the ADDNOD subroutine should read

```
    1 NEXT=LIST(I,2)
      IF(NEXT.EQ.0) GO TO 2
      IF(VALUE.LE.LIST(NEXT,1)) GO TO 2
      I=NEXT
      GO TO 1
    2 LIST(I,2)=N
      LIST(N,2)=NEXT
      RETURN
      END
```

page	corrections
346	The FORMAT statement is missing a comma; F17.16' + ' should be F17.16,' + '
507	The changeall shell script as given can fail or yield wrong results if either frompattern or topattern contains certain characters that are neither letters nor digits. Please instead use the version of changeall in the archive pgm.tar.gz, which can be downloaded from https://www.ashermath.com.
544	Both index entries for indirect array addressing should list page 371 rather than page 372.
