NAME
in2err – Read text from standard-in and write it on standard-error.

SYNOPSIS
echo message | ${HOME}/bin/exe/in2err 2> errors

DESCRIPTION
The program reads a line of up to 80 characters from standard-in (Fortran unit 6) finds the index of the last nonblank in the line, and writes the leading nonblank characters on standard-error (Fortran unit 0).

UNITS and FILES
5   standard-in
0   standard-error

BUGS
The program assumes that its input will be a message no longer than 80 characters.

AUTHOR
Michael Kupferschmid

EXAMPLE
```
unix[1] echo "a message" | in2err 2> errors
unix[2] more errors
a message
unix[3]
```
